4 DesignPay Features That Can
Improve Your Firm's Process

DesignPay allows you to expand your payment options beyond paper checks, allowing you to accept client payments in the form of credit cards, debit cards, and eChecks anytime, anywhere. But those aren't the only benefits of adopting DesignPay into your firm. Here are four DesignPay features that can make a big difference in your architecture business and in your bottom line.

1 Custom Payment Links

Why funnel your clients to one place to pay your bill? With DesignPay, you get a customizable payment page that you can link from a variety of places. Attach a payment link to an email, your email signature, your website, on a digital invoice, or even in a text message. Boost your cashflow by giving your clients the convenience of paying online, wherever they are!

2 Quick Bill

Want an even simpler invoicing solution? DesignPay's Quick Bill feature generates a pre-filled invoice complete with a payment button and sends it to your client with a click of a button. Your client then enters their payment information and submits, and your invoice is paid. Make getting paid easy and speed up your billing process with Quick Bill!

3 Scheduled Payments

Traditionally, chasing down unpaid late invoices was unfortunately just a part of the business. But with DesignPay, you can ensure invoices are always paid on time with Scheduled Payments. Work with your client to come up with an automated payment plan that can charge at a rate you both agree to.

4 Dashboard

Do you know how well your firm is doing financially at any given moment? You can, with DesignPay! The Dashboard gives you a birds eye view of your transactions at any given moment and look at payment trends over time. You can also easily print out detailed payment reports for simpler reconciliation.
